TITLE : VEHICLE BLOCK NET

ABSTRACT : **PROBLEM TO BE SOLVED:** To provide a vehicle block net which is light-weighted, can be simply carried, easily used and safely stop a vehicle by fixing a sticking member stuck to the tire of the vehicle to the peripheral edge of a turnable sheet-like net.

SOLUTION: Plural sheets of glass fiber cloth 30 are sewn on one side 20a of a turnable rectangular sheet-like net 20 and fixed to construct a vehicle block net 10. An adhesive for making the fiber cloth 30 adhere to a tire is applied to the surface of each fiber cloth 30. This net 10 is laid on the road surface, whereby after the fiber cloth 30 sticks to the tire of the vehicle which has passed thereon, the net 20 gets twisted round the tire. Accordingly, the rotation of the tire can be stopped forcibly to inhibit running of the vehicle, so that the vehicle can be safely stopped. The net 10 is light-weight, and can be easily carried by rolling or folding the net. Further at the time of use, it is sufficient to just spread the rolled or folded net 10 to be used, so that it can be easily used.
